How To Obtain A Building Permit for a Manufactured Home
Manufactured Homes Plan Submittal List

Accepted: Date________ Initials______

**Type of Use** (please check the use that applies to your manufactured home)

- Primary Dwelling (first dwelling on property).
- Accessory Dwelling (second dwelling on parcel).
- Medical Hardship Dwelling (temporary use allowed with approval of Planning Department with conditions).
- Construction Site Dwelling (for temporary occupancy during construction of dwelling, requires a valid dwelling permit. Mobile to be removed as a condition of final).
- Other, please explain desired use __________________________________.

**Provide two sets of the following support system information:**

- Marriage line detail. Show spacing of piers and design weights, use RADCO approval of mobile home for statistics. This information is floor plan specific and can be obtained from the manufacturer of the home.
- Foundation line drawing ("As-Built" drawing). Show support spacing on girders and marriage line, to match as built. Support spacing on girders can be found in the manufactured home builder’s installation manual. Show the location of tie downs, pad sizes, and weights carried on pads for marriage lines only.
- Engineered support system. This is the product you will use to support this home. The manufacturers have prepared engineering about their products.
- Tie down system engineering is required, if tie downs are being used. They are typically required on manufactured home support systems that are not engineered as permanent foundation systems.

**Provide three sets of the following documentation for your project**

- Plot Plan. Show all structures on parcel, setbacks, and setbacks between structures. Show location of well and septic if applicable.
- Clearances from Other Departments. Our Permit Office staff will route your plans to the other departments to see if they need anything from you or have any further questions about your project. You may hand carry your project to the other departments if you wish, although it is not necessary. We will contact you, if, during the routing, we find that you need to meet with another department.

**Provide the following documentation**

- Fire Letter. A certificate of release from the local Fire District shall be obtained before issuance of a building permit. This will show any conditions required by the Fire Department.
- School Fee Letter. Obtain a school fee letter from the local school district. This will show fees collected or waived by the school district. **Note:** The form can be obtained from Permit Office staff, who will verify the square footage of the living area in your mobile home, which must be provided to the school.
- Forms for California State Department of Housing and Community Development (HCD) for Manufactured Homes on Foundation Systems. Fill out HCD forms 433A and 433B (BID# 0974 and 0975) for recording with the County of Sacramento and the State of California.
- Postal Money Orders. A postal money order or cashier’s check (with no expiration or void date) payable to the Department of Housing and Community Development based on $11.00 per each transportable side. Also a postal money order (with no expiration or void date) payable to the County of Sacramento based on $9.00 for the first page and $3.00 for each additional page.

This is not a complete list of all required submittals, and additional information may be required after plan review. Other departments and agencies may have to review and approve plans before permits can be issued. Environmental Health Division approval is required in Sacramento County for septic systems, water wells, and noise variances for residential pool equipment and air conditioning units.
INSTALLATION REQUIREMENTS FOR MANUFACTURED HOMES
MOBILE HOMES INSTALLED ON A SUPPORT SYSTEM

BACKGROUND
On July 20, 1994, legislation was signed adding two new requirements to the installation of mobile homes and manufactured homes, installed without a permanent foundation system. The operative date of the legislation is September 20, 1994.

SB750 added section 18613.4 to the Health and Safety Code. It requires an installation to include tiedowns of sufficient number to resist a wind load of fifteen pounds per square foot of wall area to include mechanical connections that anchor the home to concrete or steel piers supporting the home and also anchoring the piers to their supporting pads (footing).

Specific regulations can be found in Title 25 of the California Code of Regulations, sections 1002, 1020, 1320, 1326, 1336, 1336.1, 1336.2 and 1336.3.

TIEDOWN SYSTEMS
A tiedown system must be installed on a home initially installed (or reinstalled) on a lot anywhere in California. Tiedowns must be listed by a testing agency and used in sufficient numbers on each side of the home to resist wind loads of fifteen pounds per square foot of sidewall (or the manufacturer's listed design load of the home, whichever is greater). The design load is provided on the date plate permanently attached to the home.

An engineered tiedown system may be used when designed to meet the referenced load criteria. Full specifications of the engineered system must be included with the permit application.

Two tiedowns shall be installed at each end of each individual section of the home. They shall be of equal capacity to the tiedowns installed on the sides of the home. Endwall or corner tiedowns shall be installed at a **45-degree angle** (in the plan view).

Tiedown assemblies must be listed by an approved testing agency. The listing will provide the working load that the assembly has been found to be capable of sustaining for a specific type of soil. Unless otherwise indicated, assume type 5 soil, with a working load of 1000 pounds per square foot. (See table 18-I-A of the 1997 Uniform Building Code page 1-175 for information on other soil types).

DETERMINING NUMBER OF SIDEWALL TIEDOWNS
Divide the total square footage (windload) by the working load of the tiedown assembly. Round the number up to the next highest. This will provide the number of tiedowns required for one side (in addition to the two end tiedowns).

ATTACHING TIEDOWN ASSEMBLIES TO MOBILEHOME
For a new home, refer to the manufacturer's installation instructions. When the home is not new, install the tiedowns as follows:

1. Space the tiedowns as evenly as possible along the sides and ends, while avoiding all underground utilities.
2. Place one tiedown within two feet of the end of each side and at each end of the home.
3. Connect the tiedown to the home by wrapping the strap around a main structural member (girder) and removing the slack with the tensioning device. Modification of the home or the tiedown assembly to accomplish attachment is prohibited.
4. Tiedown straps should be at a 45 or 50 degree angle, between the point of attachment (girder) and...
the tensioning device.
5. The tiedown assemblies shall be located so that they do not interfere with the skirting installation.
6. Assembly equipment exposed to weathering shall have a resistance to weather deterioration at least equivalent to that provided by a coating of zinc on steel.

PERMIT REQUIREMENTS
When you apply for a permit to install a mobilehome, or manufactured home, you must comply with minimum mobilehome installation requirements. Refer to BiD Form #307B. In addition you must provide:

Installation instructions from the manufacturer that include use of tiedowns; and installation instructions for listed tiedown assemblies; or plans and specifications for a tiedown system designed and wet-signed by an engineer or architect.

INSTALLATION INSPECTION
A written statement must be provided at the time of inspection, stating that; “Those portions of the tiedown system installed below grade,

1. Were not damaged prior to, or as a result of this installation,
2. Were not modified prior to or during the installation,
3. Were installed in accordance with the terms of their listing or engineered plans, as applicable.

Provide a copy of the maintenance instructions for the tiedown system, in the home for the owner. Provide copies of any engineering for the owner.

MECHANICAL CONNECTIONS
Support systems consisting of metal piers or concrete piers (not concrete block support systems) must include mechanical connection of the piers to the home and the piers to the support pad (footing).

The connections must be accomplished without modification of the home or the pier. The use of a listed pier that is designed for mechanical connections meets this requirement. The final installation must not separate or slide in the event that the home is subjected to horizontal loads from any direction and/or to vertical loads upward or downward.

If a listed pier does not incorporate a mechanical means of attachment, you must provide one, without modification to the home or the pier.

Mechanical connection to the home must be fabricated of steel not less than 1/8” thick, not less than two inches wide and two inches long and conforming with ASTM Standard Specification D3933-91, Standard Specification for strapping and flat steel. Fasteners used, as part of the mechanical connection cannot be smaller than 3/8”, grade 5 bolts, nuts and lock-washers. Mechanical connection at the centerline between each transportable unit of a multi-section home must be with ¼” lag bolts or wood screws that connect the pier to a wooden structural member of the floor. The means of mechanical connection to the pad (footing) must be fabricated of corrosion resistant components.

DETERMINING WIND LOAD
Determine the square footage of the exterior sidewall. Exclude skirting from this calculation. On homes with pitched roofs, determine the square footage occupied by the plane of the roof. Divide this amount in half and add it to the square footage of the sidewall. Multiply your total square footage by the design load or 15, (pounds per square foot) which ever is greater. This will provide the final figure to determine the number of tiedowns to be installed on each side of the home.
Notice of Manufactured Home (Mobile Home) or Commercial Coach, Installation on a Foundation System

Recording of this document at the request of the local agency indicated is in accordance with California Health and Safety Code Section 18551. The document is evidence that such local agency has issued a certificate of occupancy for installation of the unit described hereon, upon the real property described with certainty below, as of the date of recording. When recorded this document shall be indexed by the county recorder to the named owner of the real property and shall be deemed to give constructive notice as to its contents to all persons thereafter dealing with the real property.

HCD FORM 433(A)
MANUFACTURED HOME (MOBILEHOME) OR COMMERCIAL MODULAR
INSTALLATION ON A FOUNDATION SYSTEM
HCD FORM 433(A)

The original and three (3) copies of this form are to be completed with all available information at the time a building permit is issued for the installation of a manufactured home (mobilehome) or a commercial modular on a foundation system pursuant to Section 18551(a) of the Health and Safety Code. In addition, the enforcement agency may obtain a title search printout from the Department of Housing and Community Development’s (HCD) Registration and Titling Program. The information on the title search should be compared to the information shown on the surrendered HCD Certificate of Title or DMV pink slip(s) and registration card(s). This will ensure that the most recent ownership and registration documents have been submitted to the enforcement agency and that the registered owner owns the manufactured home, mobilehome, or commercial modular free of any liens or encumbrances. Where the title search indicates a recorded legal owner or junior lienholder, or both, evidence should be provided to the enforcement agency that the legal owner or junior lienholder, or both, have been paid in full or that the legal owner or junior lienholder consent to the attachment of the unit upon the satisfaction of their liens by the registered owner. For information on establishing a requestor account for obtaining title search printouts on-line, please call (916) 323-9229 or via the internet: http://www.hcd.ca.gov/codes/rt/.

After the installation has been approved, and on the same day the certificate of occupancy has been issued, the enforcement agency shall record this form (completed in full) with the county recorder’s office.

Upon recordation, the enforcement agency shall transmit a recorded copy of this form, a copy of the certificate of occupancy, fees collected in the amount of $11 per transportable section, and (if unit currently titled as personal property) all applicable titles, certificates, license plates or decals to:

Department of Housing and Community Development
Division of Codes and Standards
Manufactured Housing Section.
Post Office Box 31

DECLARATION IN SUPPORT OF MEDICAL HARDSHIP MOBILE HOME PERMIT
(Please Print or Type)

I, __________________________________________________, M.D., declare as follows:

1. I am a medical practitioner duly licensed to practice medicine in California.
2. __________________________________________________, age ______, is a patient under my care since

______________________________________________________________

3. Said patient is suffering from the following physical or mental disability:

______________________________________________________________

4. The disability of said patient requires immediate supervision and care by a close relative for the following reasons (check as many as applicable):

_____ Patient is unable to self-administer prescribed medical treatment.

Patient is unable to perform basic domestic chores (prepare food, maintain sanitary living conditions, etc.)

_____ Patient is unable to attend to own personal needs (dress self, bathe, maintain personal hygiene) without direct assistance.

_____ Other. Please specify: __________________________________________

______________________________________________________________

5. The amount and type of care required by said patient as a result of the above disability is as follows: Please indicate frequency of care provided (e.g., several times daily, daily, every few days, etc.)

______________________________________________________________

6. In my opinion, said patient’s condition will require supervision and care to continue for the following period of time: _______________________________________________________________________

I declare under penalty of perjury that I have read and understand the instructions printed on the reverse side of this form and that the foregoing responses are true and correct. Executed at ____________________________, California, on ____________________________________

Who is Authorized to Prepare Plans

Section 107 of the 2010 California Building Code indicates that the Building Official may require plans, computations, and specifications to be prepared and designed by an engineer or architect licensed by the State to practice as such.

In accordance with the provisions of the California Business & Professions Code, the plans, specifications, and calculations for all buildings and structures shall be prepared under the direction of and signed by a person certified by the State of California as a registered civil engineer or licensed architect. Structural and soils engineers are civil engineers with the authority to use their respective titles. Any person who practices electrical or mechanical engineering shall be registered accordingly in the State of California.

The following exemptions to the above requirements may be permitted, unless the buildings and structures are determined by the building official to be of an unusual nature where the structural stability or the safety of such buildings or structures is not evident to the Building Official. Engineering calculations and the signature of a registered engineer or licensed architect may be required in such cases.

Exemptions for Unlicensed Persons (Reference Business & Professions Code, Sections 5537, 5538, 6737.1, and 6745):

1. Any person, if conforming substantially to conventional framing requirements of the 2010 California Residential Code and Building Inspection approved framing charts, may prepare the following types of residential work:
   a. Single family dwellings of wood frame construction not more than two stories plus basement in height.
   b. Multi-family dwellings not more than two stories plus basement in height, having not more than four attached dwellings, and not more than four dwellings per lot, including not more than four attached row house dwelling units on separate lots.
   c. Wood frame garages and other structures appurtenant to a. above.
   d. Wood frame agricultural and ranch buildings unless the Building Official deems that an undue risk to the public health, safety, or welfare is involved.

Design documents (plans and calculations) for non-conventional elements that do not conform substantially to the 2010 California Residential Code and Building Inspection approved framing charts must be prepared by a licensed architect or registered civil engineer certified by the State of California. The documents for that portion shall bear the wet signature and information required of the licensee who is responsible for their preparation.

2. An unlicensed Certified Interior Designer or equally qualified unlicensed person may prepare plans and specifications for the following types of non-structural or non-seismic commercial interior additions, alterations, or tenant improvements in accordance with the provisions of the California Business & Professions Code:
   a. Tenant spaces that are classified only as B and M occupancies or dining establishments.
   b. Spaces where area separation walls and horizontal exits are not required.
   c. Spaces in the building that are not being converted from residential use.
   d. Tenant spaces that are not within historical buildings.

3. Any unlicensed person may prepare plans and specifications for the following types of non-structural or non-seismic commercial interior additions, alterations, or tenant improvements in accordance with the provisions of the California Business & Professions Code:
   a. Tenant spaces that require only one exit based on Table 1015.1 & 1021.2 of the California Building Code.
   b. Tenant spaces that are classified only as B and M occupancies or dining establishments.
   c. Spaces where area separation walls, occupancy separation walls, and horizontal exits are not required.
   d. Spaces in the building that are not being converted from residential use.
   e. Tenant spaces that are not within historical buildings.

Use of Exemption 2 or Exemption 3 is subject to approval of the Building Official. The Building Official may require plans, computations, and specifications to be prepared and designed by an engineer or architect licensed by the State to practice as such even if not required by State law.

4. Exemption for licensed contractors. (Reference B & P Code, Section 6737.3.) Contractors licensed in the State of California are not prohibited from designed mechanical and electrical systems of facilities for work to be performed by such contractor within the classification for which his/her license is issued. Nothing in this Section is intended to imply that a licensed contractor may design work that is to be installed by others.

Incomplete Plans:
Section 107 of the 2010 California Building Code indicates that plans and specifications must be of sufficient clarity to indicate the nature and extent of the work proposed and show in detail that it will conform to the provisions of the Code and all relevant laws, ordinances, rules, and regulations. Plans that are so lacking in clarity or detail as to be unacceptable will be referred back to the applicant for completion and/or clarification.
Fire District Information

All plans must be submitted to the local fire district that has jurisdiction for your area. Typically 2 sets of plans are required by each Fire Department.
